

Experiment – 18

CSA1717 - Artificial Intelligence

Name: Hemalakshmi H

Reg.No.: 192571049

Aim:

To write a Python program to generate a calendar for a given month and year.

Algorithm:

1. Start the program.
2. Import the calendar module.
3. Read the year and month from the user.
4. Use the calendar.month(year, month) function to generate the calendar.
5. Display the calendar for the given month and year.
6. Stop the program.

Source code:

```
# Program to generate calendar for a given month and year
```

```
import calendar
```

```
# Taking input
```

```
year = int(input("Enter year: "))
```

```
month = int(input("Enter month (1-12): "))
```

```
# Display calendar
```

```
print("\nCalendar:")
```

```
print(calendar.month(year, month))
```

Flowchart:

Output:

```
Python 3.14.0 (tags/v3.14.0:ek
Enter "help" below or click "F
>>>
= RESTART: C:/Users/hemal/OneI
Enter year: 2026
Enter month (1-12): 2

Calendar:
    February 2026
Mo Tu We Th Fr Sa Su
                1
 2  3  4  5  6  7  8
 9 10 11 12 13 14 15
16 17 18 19 20 21 22
23 24 25 26 27 28
```

Result:

The program successfully generates and displays the calendar for any given month and year using Python's built-in calendar module.
