

Experiment – 14
CSA1717 - Artificial Intelligence

Name: Hemalakshmi H

Reg. No.: 192571049

Aim:

To write a Python program to sort a list of sentences in alphabetical order.

Algorithm:

1. Start the program.
2. Read the number of sentences from the user.
3. Read each sentence and store it in a list.
4. Use the sort() function to arrange the sentences in alphabetical order.
5. Display the sorted sentences.
6. Stop the program.

Source code:

```
# Program to sort sentences in alphabetical order
```

```
n = int(input("Enter number of sentences: "))
```

```
sentences = []
```

```
print("\nEnter the sentences:")
```

```
for i in range(n):
```

```
    s = input(f"Sentence {i+1}: ")
```

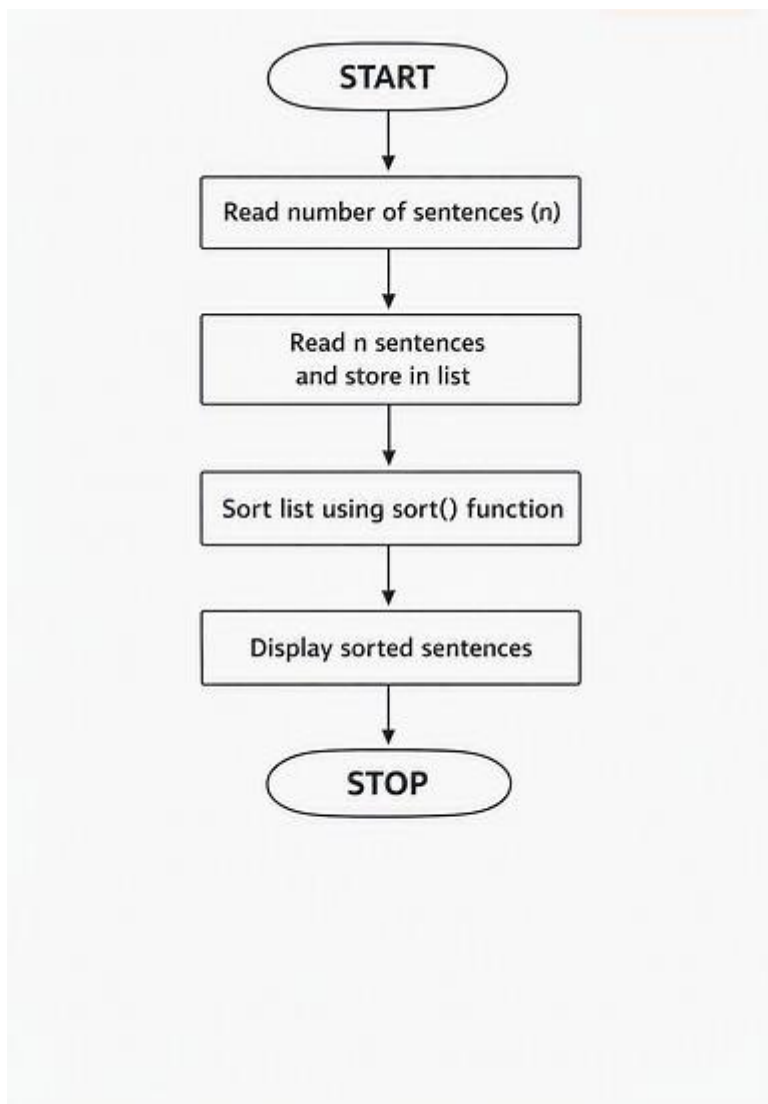

```
    sentences.append(s)
```

```
# Sorting sentences
```

```
sentences.sort()
```

```
# Displaying sorted sentences
print("\nSentences in alphabetical order:")
for s in sentences:
    print(s)
```

Flowchart:

Output:

```
File Edit Format Run Options Window Help
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct
Enter "help" below or click "Help" above
>>>
= RESTART: C:/Users/hemal/OneDrive/Docum
Enter number of sentences: 4

Enter the sentences:
Sentence 1: mango is sweet
Sentence 2: apple is healthy
Sentence 3: zebra is an animal
Sentence 4: cat drinks milk

Sentences in alphabetical order:
apple is healthy
cat drinks milk
mango is sweet
zebra is an animal
```

Result:

The program successfully reads multiple sentences, sorts them alphabetically using the `sort()` method, and displays the sorted list.
